

Regrid Run Scaling
For Different Decompositions

Regrid Store Scaling
For Different Decompositions

These sample results are for regridding from a 720×360 source grid to a 1080×540 destination grid using bilinear interpolation. The different decomposition descriptions refer first to the source grid decomposition and second to the destination grid.

Timings by Peggy Li on NCAR's IBM system bluesky, December 2004.
